RE: Pinnacle Pristine Lifetime shingle dimension changes:

Effective July 1, 2013 the Pinnacle Pristine Lifetime shingle dimensions and design changed and was replaced by the new **Pinnacle Pristine featuring HP Technology**. This created a “Do Not Mix” scenario with the previous Pinnacle Pristine shingle.

- The **Pinnacle Pristine shingle featuring HP Technology** features a larger 6” weather exposure (from 5 $\frac{5}{8}$ ”), dual “Sweet Spot” sealant lines which define the nailing area and the overall dimension change of the shingle to 14” x 39 $\frac{3}{8}$ ”.

Atlas has since, in 2017, made an additional product improvement to the Pinnacle Pristine HP and now offers the **Pinnacle Pristine HP42** shingle.

- This latest improvement is only in the length of the shingle. We have increased the length from 14” x 39 $\frac{3}{8}$ ” to 14” x 42” dimensionally. All other features remain the same as the Previous Pinnacle Pristine featuring HP Technology shingle.

Atlas no longer offers a laminate shingle with a 5 $\frac{5}{8}$ ” exposure nor a laminate that is 39 $\frac{3}{8}$ ” in length. The new **Pinnacle Pristine HP42** Technology shingle cannot be installed on the same plain of the roof or used to replace damaged shingles of the same brand name unless they are of the same exposure.

Sincerely,

Paul Casseri

Re: Atlas Castlebrook Shingles

Date: March 12, 2015

Dear Valued Menard's Team Members,

This memo is to address the different Atlas Castlebrook™ shingles that can be potentially received and stocked in your stores. There are circumstances that inevitably come along to necessitate a communication of a **“Do-Not-Mix”** situation on our shingles. This memo is to communicate a current **“Do-Not-Mix”** warning regarding the Franklin Castlebrook™ 35 shingles.

There are **NO** product quality concerns that necessitate this **“Do-Not-Mix”** situation. All the Castlebrook™ shingles in your stores are of 1st quality.

Atlas currently manufactures the Castlebrook product in two manufacturing plants. Our Franklin Ohio plant has successfully completed updates and improvements to our shingle line. The Castlebrook™ shingles now being manufactured out of Franklin Ohio have been improved with additional benefits for your guests. The new Castlebrook™ shingles will offer your guests a larger shingle size (39 3/8" x 14"), larger 6" exposure, double sealant strips and 20 shingles/bundle (3 bundles/square).

Production of the new shingle design has started and product is currently being shipped into your stores. As we both continue to transition through our inventory, you will need to be aware of the differences in the packaging and make sure product is not mixed in inventory and/or fulfilling orders.

Please see the attached photos for clarification.

Sincerely,

Paul Casseri
Product Manager
